

With over twenty years of experience “under the house,” only Crawl Space Door Systems understands the challenges faced in eliminating moisture and indoor air quality problems.

We stand behind these innovative products as second to none.

“If you need foundation vents, crawls space doors with built-in fans or under-house fans, vapor barriers, or anything having to do with ventilation and moisture control, I highly recommend Crawl Space Doors.”

Vivian Teter, Norfolk, VA

“Crawl Space Doors did an excellent job for us. They always showed up when promised and worked diligently to solve the problem. I would highly recommend Crawl Space Doors to anyone who asked. Also, your technical advice and consideration in not overselling and doing only what was effective and necessary evidenced your knowledge and experience in doing work “under-the-house.”

Gerald Harris, Virginia Beach, VA

We had a lake under our house, literally! We had several “moisture” control companies look at the problem and they all said the same thing “you need sand under there”. The problem was, we had already pumped several tons of sand into the crawl space – to no avail. Crawl Space Doors looked at our moisture problem, analyzed it, and recommended a solution that not only made sense, it worked. Thank you Crawl Space, you did a terrific job.

Mr. and Mrs. José Barcita, Chesapeake, VA

Protect Your Home and Your Health

Mold and moisture can be extremely destructive and unhealthy to a house structure and its inhabitants. To maintain optimal indoor air humidity and air quality levels, the EPA strongly recommends proper crawl space ventilation.

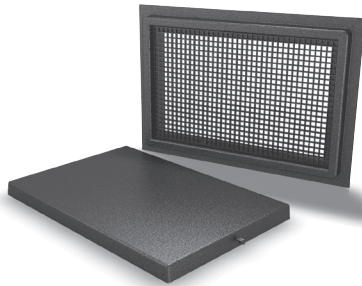

Crawl Space Door Systems has engineered and patented a unique selection of crawl space doors, vents, louvers and fans. These patented systems are designed to allow maximum crawl space ventilation. Our fans provide forced ventilation that can be directed to create air jet streams, even to air trapped areas.

Our products are engineered as a solution for each unique home's ventilation problems, and are available as:

- 1) a stand-alone portable fan
- 2) a door with screen
- 3) a door with screen and fan

This patented technology is unparalleled by industry standards.

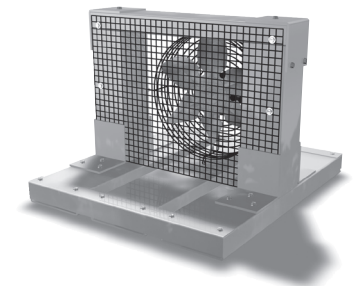

Deluxe Doors

The doorplate is a one-piece construction designed to fit seven standard sizes. Made of durable PVC/ABS plastic (no rust or decay) with UVretardant, the door is excellent for new construction, repairing, remodeling and replacement. Installation is quick and easy.

Doors With Fan

An ABS/PVC exterior mounted exhaust fan door with floating louvers and OSHA required guards and screens, this system is easy to install and remove to gain access to the crawl space. The system is controlled with a timer and/or humidistat. With six available propeller diameters and CFM capabilities, this solution will accommodate almost any home's ventilation requirements.

Portable Fan

Crawl Space Door Systems' fans are portable to direct air flow into hard to reach areas and create necessary jet streams. It comes in PVC plastic breakdown frame to get it in the crawl space, and the fan sits within a sealed housing and has OSHA required guards. There are six different propeller diameters and CFM units.

Free In-Home Consultation from our Ventilation Specialists

Crawl Space Door System solutions are engineered for your home's unique ventilation requirements.

You'll want to contact us if you have noticed:

- A musty, moldy odor in your home
- Excessive allergic reactions from inhabitants
- Dampness, moisture, damaged wood or water in your basement or crawl space
- Broken, blocked or closed crawl space doors

Our ventilation specialists will:

- Assess drainage problems.
- Inspect your crawl space and check for signs of damage caused by too much moisture from ground or rain water, condensation, leaking plumbing, or poor ventilation.
- Record moisture readings of the wood under your home with a moisture meter and ascertain levels of rot, mold and fungus.
- Identify air flow problems and potential ventilation solutions.
- Determine the best ways to improve the ventilation of the crawl space and recommend a ventilation system which may include doors, vents, louvers and fans where appropriate.

Only Crawl Space Door Systems has the experience and technology to protect your most important asset.

* Licensed, insured Class "C" Virginia contractor.
